This sequence was determined by the E. coli Genome Project at the University of Wisconsin-Madison (Frederick R. Blattner, director). Supported by NIH grants HG00301 and HG01428 (From the Human Genome determined from E. coli K12 strain MG1655. Predicted open reading frames were determined using Genemark software, kindly supplied by 30332 [e-mall: mark@amber.gatech.edu]. Open reading frames that site Nos., unique ID nos. for the genes in the E. coli Genetic Stock Center (CGSC) database at Yale University, kindly supplied by ongoing task whose goal is to make the genome sequence more useful procrelated. Updated information will be available at the E. coli Genetic Stock Center (CGSC) database at Yale University, kindly supplied by correlating it with other data. Comments to the authors are genome Project's World Wide Web site (http://www.genetics.wisc.edu). *** The E. coli K12 sequence and sequence changes. Annotation updates: updated gene identifications Riley; added promoters, protein binding sites, and repeated sequences described in reference 1. The unique numeric identifiers RNA-encoding) are now designated as gene synonyms instead of names. This should allow them to be searched for in Entrez as gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Direct Submission

Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal. Disclosure; Page 136; 139pp; English.

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the

```
CC homologous species; (3) directing recombination of a recombinant gene CC back into the chromosome of the homologous species, replacing the native CC copy of that gene, and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant aging protein containing a replacement segment or segments of foreign amino CC acid sequence or sequences grown on a Salmonalla, E. coli or CC useful for the animal in conjunction with a carrier or diluent. (I) is CC system the heterologous antigens are presented in high numbers (up to copies/cell), the hybrid fimbrin protein possesses both the CC system the heterologous antigens are presented in high numbers (up to copies/cell), the hybrid fimbrin protein possesses both the CC vaccine, the carrier fimbrial submit proteins are usually strong companient, the inserted epitope, and hybrid fimbriae are usually strong conspensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                           25-MAR-2003

The nucleic acid can be used to provide diagnostic assays for Salmonella and/or enteropathogenic bacteria of the family Enterobacteria. It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide probes or primers which can specifically hybridise to nucleic acid molecules from greater than 99% of Salmonella strains that are pathogenic to warm-blooded animals relative to nucleic acid molecules from virtually all other microbial organisms.                      CC The present invention describes a recombinant agfA gene (I) where a CC segment of the gene has been replaced by a segment of a foreign DNA CC sequence which encodes a foreign ppitope or antigen. Also described are: CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended CC assembly system of strains of Salmonella, Escherichia coli and CC Enterobacteriaceae for the production of fimbriae comprising recombinant CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2) CC directing recombination of a recombination of a recombination of the chromosome of the homologous species; (3) directing recombination of a recombination of a recombinant gene back into the chromosome of the homologous species, replacing the native CC comprising separating an amino and (4) eliciting an immune response in an animal, CC comprising separating an amino and containing a replacement segment or segments of foreign amino CC Enterobacteriaceae host cell, from the host cell and introducing the colymer into the animal in conjunction with a carrier or diluent. (I) is colymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for cell, the hybrid fimbrial presentation constituent has a constituent of the containing an amino conjunction with a carrier of the tell to conjunction an animal. In a fimbrial presentation conjunction protein which is useful for the expression of recombinant and in high numbers (up to compare the heterologous antigens are presented in high numbers (up to terms).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            á

The present invention describes a recombinant agfA gene (I) where a compensation of the gene has been replaced by a segment of a foreign DNA component of the gene has been replaced by a segment of a foreign DNA component of the gene has been replaced by a segment of a foreign DNA component of thin aggregative fimbriae (SEF1)/TAP1 nucleation depended are: component of strains of Salmonella, Escherichia coli and component of strains of Salmonella, Escherichia coli and component of strains of salmonella, Escherichia coli and component of strains of salmonella, Escherichia coli and component of sequence of the component of a recombinant gene into the chromosome of the composus species; (3) directing recombination of a recombinant gene comprising recombination of a recombinant gene comprising separating an amino acid polymer comprising a recombinant agene comprising a replacement segment of a recombinant AgfA component in an animal, component of the component of sequence or sequences grown on a Salmonella, E. coli or component on the animal in conjunction with a carrier or diluent. (I) is conjunction with a carrier or diluent. (I) is conjunction with a carrier or diluent. (I) is conjunction with a carrier or diluent. (I) is conjunction with a carrier or diluent in conjunction with a carrier or diluent. (I) is conjunction, the hybrid fimbrin protein poseesses both the conjunction with a carrier or diluent in the useful for immunogenicity and adhesion properties relevant for an efficient live value of the component of the present of dimunogens, which may be important for directing an immune response in an expensive to purify in large amount. The present sequence is given in

CC The present invention describes a recombinant agfA gene (1) where a CC segment of the gene has been replaced by a segment of a foreign DNA CC sequence which encodes a foreign epitope or antigen. Also described are: CC (1) use of thin aggregative fimbriae (SER17/TAF) nucleation depended CC assembly system of strains of Salmonella, Escherichia coli and CC Enterobacteriaceae for the production of fimbriae comprising recombinant CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2) CC directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene into the chromosome of the homologous species, replacing the native CC copy of that gene; and (4) eliciting an immune response in an animal, CC comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino CC acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the CC useful for the expression of recombinant AgfA protein which is useful for CC useful for the expression of recombinant. In a fimbrial presentation CC system the heterologous antigens are presented in high numbers (up to CC useful containity and adhesion properties relevant for an efficient live translation, the hybrid fimbrin protein seems both the commongenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong CC immunogens, which may be important for directing an immune response CC against the inserted epitope, and hybrid fimbriae are easy and CC inexpensive to purity in large amount. The present sequence is given in tx

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Agra, Caga and Agra, homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the chromosome of the chromosome of the chromosome of the copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant Agra acid sequence or sequences grown on a Salmonella, E. coli or copymer into the expression of recombinant agrant in the expression of recombinant agrant in the expression of recombinant agrant in the expression of recombinant agrant and introducing the useful for the expression of recombinant agrant agrant in the heterologous antigens are presented in high numbers (up to copies/cell), the hybrid finbrin protein possesses both the communogenicity and adhesion properties relevant for an efficient live communogens, which may be important for directing an immune response community in large amount. The presentation in assist the inserted epitope, and hybrid fimbriae are easy and the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8888888888888888888888888888888888

                                                                                                                                          뭐
                                                                                                                                                                                                                                                                           The present invention describes a recombinant agfA gene (I) where a CC sequence which encodes a foreign pitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SER17/TAF) nucleation depended CC assembly system of strains of Salmonella, Escherichia coli and CC AgfA, CsgA and AgfA-homologue fimbria subunits, respectively; (2) (2) thomologous species; (3) directing recombinant gene into the chromosome of the comprising recombinant gene copy of that gene; and (4) eliciting an immune response in an animal, a copy of that gene; and (4) eliciting an immune response in an animal, copy of the squence or sequences grown on a Salmonella, Escapential a recombinant gene comprising a recombinant gene copy of that gene; and (4) eliciting an immune response in an animal. CC acid sequence or sequences grown on a Salmonella, E. coli or polymer into the animal in conjunction with a carrier or diluent. (I) is conjuncting an immune response in an animal. In a fimbrial presentation of system the heterologous antigens are presented in high numbers (up to comparisor, the carrier fimbrial subunit protein pessesses both the composens of the hybrid fimbrin protein pessesses both the comparisor, which may be important for directing an immune response (CC against the inserted epitope, and hybrid fimbriae are easy and content of the present invention of the present invention in the carrier in large amount. The present sequence is given in
                                                                                                                                                                   Ş

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SER17/TAR) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA. CegA and AgfA-homologue fimbria nubunite, respectively; (2) directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene back into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, agfA
                                                                                                                                                                                                                                                       Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Salmonella; agfA; chromosomal gene replacement; fimbrin; epitope; vaccine; immune response; immunogen; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) useful for the expression of recombinant AgfA protein which is useful eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and the properties of the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the present sequence in given in the present sequence is given in the present sequence in given in the present sequence is given in the present sequence in given in the present sequence is given in the present sequence in g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 456 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        exemplification of the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) useful for the expression of recombinant AgfA protein which is useful eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and the present to purify in large amount. The present invention describes a recombinant agfA gene (I) where a CC segment of the gene has been replaced by a segment of a foreign DNA CC sequence which encodes a foreign epitope or antigen. Also described are: CC (1) use of thin aggregative fimbriae (SEF1/T/TAF) nucleation depended CC assembly system of strains of Salmonella, Escherichia coli and CC AgfA, CSGA and AgfA, homologue fimbrin subunits, respectively; (2) CC directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombination of a recombinant gene cc copy of that gene; and (4) eliciting an immune response in an animal, CC comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino CC acid sequence or sequences grown on a Salmonella, E. coli or CC eliciting an immune response in the host cell and introducing the polymer into the animal in conjunction, with a carrier or diluent. (I) is CC useful for the expression of recombinant AgfA protein which is useful for the expression of recombinant AgfA protein which is useful for segment of the expression of recombinant for an efficient live conjunction, the hybrid fimbrin protein sare usually strong the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier imbrial subunit proteins are usually strong to immunogenic the carrier imbrial subunit proteins are usually strong to immunogenic the carrier imbrial subunit proteins are usually strong to immunogenic the carrier imbrial subunit proteins are usually strong to immunogenic the carrier imbrial subunit proteins are usually strong to immunogenic the carrier in the interior and immune response in the immune response of immunogenic transport to the carrier in the carrier in the content of the carrier in the carrier in the carrier in the carrier in the carrier in the carrier in the carrier in the carrier in the carrier in the carrier in the carrier in the carrier in the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ş

Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.

Disclosure; Page 137; 139pp; English.

The present invention describes a recombinant agfA gene (I) where a CC segment of the gene has been replaced by a segment of a foreign DNA CC sequence which encodes a foreign epitope or antigen. Also described are: CC (1) use of thin aggregative fimbriae (SEF1/T/TAF) nucleation depended CC assembly system of strains of Salmonella, Escherichia coli and CC Enterobacteriaceae for the production of fimbriae comprising recombinant CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2) CC directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene CC copy of that gene; and (4) eliciting an immune response in an animal, CC comprising separating an amino acid polymer comprising a recombinant AgfA CC protein containing a replacement segment or segments of foreign amino CC acid sequence or sequences grown on a Salmonella, E. coli or CC Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent (I) is CC useful for the expression of recombinant AgfA protein which is useful for system the heterologous antigens are presented in high numbers (up to CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live constitute the inserted epitope, and hybrid fimbriae are usually strong CC immunogens to the inserted epitope, and hybrid fimbriae are easy and consequence is given in the exemplification of the present invention

                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents an isolated agfA gene fragment derived from Salmonella enteritidis 2765-3b TnphoA mutant strain. The nucleic acid can be used to provide diagnostic assays for Salmonella and/or enteropathogenic bacteria of the family Enterobacteria. It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide probes or primers which can specifically hybridise to nucleic acid molecules from greater than 99% of Salmonella strains that are pathogenic to warm-blooded animals relative to nucleic acid molecules from virtually all other microbial organisms. (Updated on 25-MAR-2003 to correct PF field.)
